Report Overview

A manhole inspection camera system is a specialized tool used to inspect the interior of manholes, sewer lines, and other underground structures. It typically consists of a high-resolution camera mounted on a flexible cable that can be lowered into the manhole to capture images and video footage of the interior. These camera systems are equipped with powerful LED lights to illuminate the dark and often cramped spaces inside manholes, allowing inspectors to see clearly and identify any issues or damage. The images and video footage captured by the camera can be viewed in real-time on a monitor above ground, allowing inspectors to assess the condition of the manhole and make any necessary repairs or maintenance. Manhole inspection camera systems are an essential tool for municipal workers, utility companies, and construction crews who need to inspect and maintain underground infrastructure. They help to identify problems such as blockages, leaks, corrosion, and structural damage, allowing for timely repairs and preventing more serious issues from occurring.
