Report Overview

Mapping LIDAR Laser, also known as Light Detection and Ranging, is a remote sensing technology that uses laser light to measure distances and create high-resolution, three-dimensional maps of the Earth's surface. This advanced technology involves emitting laser pulses from an airborne or terrestrial platform, which then bounce off objects on the ground and return to the sensor. By measuring the time it takes for the light to travel to the target and back, the system can calculate the distance and create a detailed point cloud of the terrain. Mapping LIDAR Laser is widely used in various applications, including topographic mapping, urban planning, environmental monitoring, and autonomous vehicle navigation, providing valuable data for accurate and efficient decision-making in these fields.
