### Report Overview

Marine abrasives are specialized abrasive materials used in shipbuilding, maintenance, and repair, primarily for surface preparation, cleaning, and finishing of marine vessels and offshore structures. These abrasives must withstand harsh marine environments, including saltwater corrosion, high humidity, and extreme pressure, making durability and performance critical factors. Common types include steel grit, aluminum oxide, and garnet, often used in blasting applications to remove rust, paint, and fouling from hulls, decks, and other marine surfaces.
