Abstracts

Mass spectrometry calibration solutions are solutions or mixtures of known chemical compounds used to calibrate mass spectrometers, which are analytical instruments used to identify and quantify the chemical and molecular composition of a sample. These calibration solutions typically contain a mixture of compounds with known molecular weights and ionization properties, which are used to calibrate the mass spectrometer's mass-to-charge ratio (m/z) scale. The calibration solutions are introduced into the mass spectrometer, and the instrument's response to each compound is measured, allowing the instrument to be calibrated for accurate measurement of unknown samples. Mass spectrometry calibration solutions are important for ensuring the accuracy and precision of mass spectrometry analysis, which is used in a wide range of applications, including pharmaceuticals, environmental analysis, and forensic science.

The global Mass Spectrometry Calibration Solutions market size was estimated at USD 786.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
