Report Overview

A mechanical parking system is an automated and space-efficient solution for parking multiple vehicles in a vertical or horizontal arrangement. Instead of traditional parking spaces, these systems use a combination of mechanical lifts, conveyors, turntables, and other mechanisms to transport and position vehicles within a designated parking structure. These systems aim to maximize the use of available space by stacking or moving vehicles vertically or horizontally, reducing the footprint required for parking. Mechanical parking systems offer advantages such as increased parking capacity, quicker retrieval times, and enhanced space utilization, making them suitable for urban environments where land is limited and parking space is at a premium.
