Advancements in medical technology and increasing focus on healthcare and patient well-being are driving the robust growth of the biomedical textiles market. Rising prevalence of chronic diseases and aging population is driving the demand for innovative medical solutions including biomedical textiles. Being biocompatible, flexible, and durable, these textiles are essential in a wide range of applications such as wound care, surgical implants, and prosthetics. Technological advancements are enhancing the functionality of biomedical textiles, leading to the development of smart textiles with embedded sensors and drug delivery systems. Moreover, increasing focus on minimally invasive surgeries and personalized medicine is further driving the market growth. Biodegradable fibers are those that can be absorbed by the body within 2-3 months after implantation. These include cotton, viscose rayon, polyamide, polyurethane, collagen, and alginate.
