Report Overview

A Medical Pulse Flusher is a specialized medical device designed to effectively flush out fluids and medications from intravenous (IV) lines or catheters. This device is crucial in maintaining the patency of IV lines and preventing complications such as blood clots, infections, and medication residue buildup. It typically consists of a small, handheld mechanism that delivers a pulsatile flow of saline or heparin solution, simulating the natural rhythm of blood flow. The Medical Pulse Flusher is an essential tool in patient care, particularly in settings where IV therapy is a common practice, such as hospitals, clinics, and home healthcare. It is designed to be user-friendly, often featuring a simple push-button mechanism for ease of use by healthcare professionals, and is made from materials that meet strict medical standards for safety and hygiene.
