### Report Overview

A hospital thermal flow meter is an instrument used to measure the rate of flow of a fluid, typically air or another gas, in a medical setting. It works by sensing the temperature difference created when the fluid flows across a heated surface. This temperature difference, which is proportional to the fluid's velocity, is measured to determine the flow rate. Thermal flow meters are particularly useful in hospital environments for monitoring and controlling the flow of medical gases, such as oxygen or nitrogen, and for managing ventilation systems to ensure a healthy and comfortable indoor air quality for patients and staff.
