Report Overview

Medium and Low Grade Grain Oriented Electrical Steel is a type of electrical steel, which is a specialized type of steel used in the manufacturing of electrical equipment, particularly transformers and electric motors. This product is characterized by its grain-oriented structure, which is achieved through a specific manufacturing process that aligns the crystal grains in a particular direction. This orientation enhances the steel's magnetic properties, making it highly efficient in conducting magnetic fields. The "Medium and Low Grade" classification refers to the material's magnetic properties and its performance in applications requiring lower magnetic flux density. These grades are typically used in applications where high efficiency and power loss are not critical, such as in smaller or less demanding electrical devices. The steel is valued for its ability to reduce energy loss and improve the efficiency of electrical equipment, making it an important material in the power and energy sectors.
