Report Overview

Medium and low-grade non-grain-oriented electrical steel (NGOES) is a specialized type of steel used primarily in electrical applications such as motors, transformers, and generators, where magnetic properties are critical but high performance is not required. Unlike grain-oriented electrical steel, which is optimized for directional magnetic flux, NGOES has isotropic magnetic properties, making it suitable for applications where the magnetic field direction varies. Medium and low-grade variants are distinguished by their lower silicon content and magnetic permeability compared to high-grade NGOES, resulting in reduced efficiency but lower production costs. These grades are commonly used in cost-sensitive applications, including small motors, household appliances, and industrial equipment, where balancing performance and affordability is essential. The market for these materials is driven by demand from emerging economies, the expansion of renewable energy infrastructure, and the growing electrification of industries, though it faces competition from alternative materials and higher-grade steels in premium applications.

This report provides a deep insight into the global Medium and Low Grade Non Grain-oriented Electrical Steel market covering all its essential aspects.
