Abstracts

Meeting Minutes Software is an intelligent productivity tool that integrates voice recognition, natural language processing (NLP), and collaboration features to automate and streamline the creation, organization, and sharing of meeting records. It captures meeting audio in real time, converts it into text (supporting multi-language transcription and speaker separation), automatically extracts key points, decisions, and action items, and generates structured summaries?eliminating manual note-taking inefficiencies. Compatible with mainstream video conferencing platforms, it supports real-time collaborative editing, multi-format export (PDF, Word), and centralized storage for easy retrieval, catering to both in-person and remote meetings across teams and industries. Demand for this software is growing steadily driven by the rise of remote/hybrid work, the need to reduce time spent on manual note-taking, and the pain points of missing information or inconsistent meeting records. Teams and enterprises seek to improve meeting efficiency, ensure actionable follow-ups, and break language barriers in cross-border collaborations. Key opportunities lie in enhancing AI-driven accuracy (e.g., industry-specific terminology recognition), integrating with project management/HR systems for seamless action item tracking, and offering privacy-focused solutions (local data processing for sensitive meetings). Providing tiered services (free basic transcription vs. enterprise-grade analytics) and expanding scenario coverage (sales interviews, educational workshops) can further tap into global market potential amid ongoing digital workplace transformation.

The global Meeting Minutes Software market size was estimated at USD 995.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
