Abstracts

Membrane Aeration Bioreactor System is a wastewater treatment system based on membrane technology. It delivers oxygen directly to the biofilm through hollow fiber membranes to support the metabolic process of microorganisms, thereby effectively removing pollutants such as organic matter and nitrogen from sewage. Unlike the traditional activated sludge method, the MABR system uses membrane aeration to avoid the energy consumption problem of blowing air directly into the water, thereby improving aeration efficiency and reducing energy consumption. It has shown efficient nitrogen and phosphorus removal capabilities in treating municipal sewage and industrial wastewater.

The global Membrane Aeration Bioreactor System market size was estimated at USD 450.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
