Abstracts

Membrane filtration separation equipment is a device that uses a semipermeable membrane to separate, purify or concentrate different components in liquids or gases. By applying pressure or an electric field, the membrane only allows molecules of a specific size or property to pass through, blocking other substances, thereby achieving separation or concentration of dissolved substances. This equipment is widely used in water treatment, food processing, pharmaceuticals, chemicals and other industries to remove suspended solids, microorganisms, ions and organic matter, improve product purity, treat wastewater, or produce high-purity substances.

The global Membrane Filtration Separation Equipment market size was estimated at USD 12540.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
