Report Overview

MEMS Semi-solid Lidar is a cutting-edge technology in the field of automotive and autonomous vehicle systems. It refers to a type of LiDAR (Light Detection and Ranging) sensor that utilizes Micro-Electro-Mechanical Systems (MEMS) to create a semi-solid-state design. This design combines the benefits of solid-state LiDAR, which offers high reliability and durability, with the performance advantages of traditional mechanical LiDAR systems. The MEMS technology allows for the creation of a compact, lightweight, and robust LiDAR system that can rapidly scan the environment, providing high-resolution, real-time data for applications such as obstacle detection, navigation, and mapping. The semi-solid nature of the system means that it requires fewer moving parts compared to fully mechanical systems, which can lead to improved reliability and longevity while still maintaining the high performance necessary for advanced driver assistance systems (ADAS) and autonomous driving applications.
