### Report Overview

A metal base substrate is a type of printed circuit board that includes a metal base. This feature has become increasingly important for LED lighting, which requires efficient heat dissipation. As a result, the demand for metal base substrates, such as those made from aluminum and copper, has risen. Unlike standard printed circuit boards, metal base substrates effectively dissipate heat, preventing high temperatures that could shorten the lifespan of components. Heat dissipation technology is crucial in power electronics as well. Silicon carbide (SiC) substrates, gallium nitride (GaN) substrates, and amplifier substrates all benefit from the use of metal base substrates.
