Report Overview

A Metal Bellows Coupling is a flexible mechanical component used in various industrial applications to connect two rotating shafts while accommodating misalignments and absorbing vibrations. It is designed with a metal bellows, which is a series of thin, concentric metal layers that form a flexible, accordion-like structure. This design allows the coupling to maintain a secure connection between the shafts while providing the necessary flexibility to handle angular, parallel, and axial misalignments. The metal bellows coupling is known for its high durability, resistance to temperature and corrosion, and low maintenance requirements. It is commonly used in applications where precise alignment is difficult to achieve or where there are significant thermal or mechanical stresses that could cause damage to rigid couplings.
