Report Overview

Metal-clad cable, also known as MC cable, is a type of electrical cable that features a metal armor or sheath surrounding the insulated conductors. This metal armor provides additional protection against physical damage, moisture, and external factors that could compromise the integrity of the cable. The metal sheath is typically made from materials such as aluminum or steel, offering a high level of durability and resistance to environmental stress. Metal-clad cables are commonly used in industrial, commercial, and residential applications where enhanced protection and safety are required. They are particularly suitable for installations in areas prone to mechanical damage or where the cable needs to be run through walls, ceilings, or other structural elements. The metal armor not only safeguards the cable but also aids in heat dissipation and can provide a degree of electromagnetic interference shielding.
