Abstracts

Metal lithium can be directly used as anode material, but there are safety risks. When used for a long time, problems such as volume expansion and lithium dendrite growth will occur. Volume expansion will cause the electrode structure to collapse, and lithium dendrite growth will pierce the battery separator, causing battery damage. short circuit. These factors limit the use of metallic lithium as anode materials. Metal lithium composite anode materials can effectively solve these problems, so its technical research continues to deepen.

The global Metal Lithium Composite Anode Material market size was estimated at USD 785.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
