Abstracts

The metal-encapsulated uncooled infrared detector is an infrared detector that is encapsulated in a metal material. The main purpose of the metal package is to provide mechanical protection and thermal management to ensure the normal operation of the infrared detector. Metal-encapsulated uncooled infrared detectors usually use metal materials such as aluminum, copper or alloys as the outer shell to provide good mechanical strength and thermal conductivity. The metal shell can effectively protect the infrared detector from interference and damage from the external environment, and can also conduct infrared radiation to the sensitive components of the detector. Metal-encapsulated uncooled infrared detectors usually have high sensitivity, fast response speed and low noise level, and are suitable for various infrared detection applications, such as security monitoring, industrial non-destructive testing, medical diagnosis, aerospace, etc. In addition, metal packaging can also provide good EMI/EMC shielding performance to prevent electromagnetic interference from affecting infrared detectors.

The global Metal Package Uncooled Infrared Detector market size was estimated at USD 380.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
