## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Metallographic Optical Microscope competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global metallographic optical microscope production reached approximately 16721 units, with an average global market price of around K US\$ 22.3 per unit. A metallographic optical microscope is a high-precision instrument based on the optical imaging principle specifically designed for observing the microstructure of metal materials. Through the optical magnification system composed of an objective lens and an eyepiece, it enlarges the surface morphology of metal samples that have undergone cutting, mounting, polishing, and chemical etching. Utilizing a reflective illumination system, it directs light at a specific angle onto the sample surface and reflects it into the objective lens. Combined with a high-numerical-aperture objective lens and a precise focusing mechanism, it enables high-contrast and clear observation of microscopic features of the internal microstructure of metals such as grain size and morphology, phase composition distribution, inclusion types and distribution, and dislocation density. Its core components include high-quality optical lens groups, an adjustable light source system, a stage, and a precise focusing device. It can be further expanded in functionality by equipping with polarizing accessories, differential interference contrast modules, or image acquisition and analysis systems. It is widely used in fields such as materials science, metallurgical engineering, mechanical manufacturing, and aerospace for key processes including material composition analysis, heat treatment process evaluation, defect detection, and failure analysis, serving as a fundamental device for studying the relationship between the properties and microstructure of metal materials.

The global Metallographic Optical Microscope market size was estimated at USD 374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
