### Report Overview

A methanol dual-fuel engine is an engine that uses the mixed combustion of methanol and another fuel such as gasoline, diesel or natural gas. Methanol is often referred to as a "renewable energy fuel" because it can be obtained through sources such as biomass or waste recycling, and its production produces much lower greenhouse gas emissions than fossil fuels. Methanol dual-fuel engines can reduce vehicle emissions, improve fuel economy, and also extend engine life. However, methanol has a relatively low energy density and thus requires a large oil storage capacity.
