### Report Overview

Methanol-powered ships are a type of marine vessel that utilizes methanol as its primary fuel source for propulsion. Methanol, a colorless, volatile, and highly flammable liquid, serves as an alternative to traditional fossil fuels such as diesel and heavy fuel oil. These ships are designed to incorporate advanced engine technology that can efficiently burn methanol, reducing harmful emissions and contributing to a more sustainable maritime industry. The adoption of methanol as a fuel is driven by its potential to lower greenhouse gas emissions, particularly when derived from renewable sources, and its compatibility with existing marine infrastructure with minimal modifications. Methanol-powered ships are part of the broader shift towards cleaner and more environmentally friendly transportation solutions, aiming to meet increasingly stringent international regulations on emissions and promote a greener future for global shipping.
