### Report Overview

Methomyl is a carbamate insecticide widely used in agriculture to control a broad spectrum of pests, including aphids, thrips, leafminers, and caterpillars, by inhibiting acetylcholinesterase in the nervous system of insects. It is available in various formulations, such as soluble concentrates and wettable powders, and is applied through foliar sprays or soil treatments. Due to its high toxicity to non-target organisms, including humans and aquatic life, its use is heavily regulated in many regions, with restrictions on application methods, dosage, and pre-harvest intervals. The market for Methomyl is influenced by agricultural demand, pest resistance patterns, and regulatory pressures, with key producers primarily located in China and India. Increasing environmental concerns and the rise of alternative, less toxic insecticides are gradually reducing its market share, though it remains significant in regions where cost-effectiveness and efficacy against resistant pests outweigh regulatory constraints.

This report provides a deep insight into the global Methomyl Original Drug market covering all its essential aspects.
