Report Overview

Methyltriacetoxysilane, also known as MTAOS, is an organosilicon compound with the chemical formula $C_5H_{10}O_3Si$. It is a colorless liquid at room temperature and is soluble in various organic solvents. MTAOS is primarily used as a coupling agent in the production of composite materials, particularly in the reinforcement of plastics and rubber with fillers such as glass fibers, carbon black, and silica. It functions by forming covalent bonds between the organic matrix and the inorganic filler, enhancing the mechanical properties and durability of the composite material. Additionally, MTAOS can be utilized in the synthesis of other organosilicon compounds and as a cross-linking agent in the production of silicone-based materials.
