Report Overview

The Micro Annular Gear Pump is a precision-engineered mechanical device designed for the efficient and reliable transfer of fluids in various industrial and scientific applications. This pump operates on the principle of positive displacement, utilizing a pair of intermeshing gears within a close-fitting annular space to transport fluid from the suction to the discharge side. The gears create a series of sealed cavities that fill with fluid as the gears rotate, and then empty as the cavities move past the pump's outlet. This design ensures a continuous, pulsation-free flow and high volumetric efficiency, making it suitable for applications requiring precise fluid control. The pump's compact size and ability to handle high pressures with minimal wear make it an ideal choice for applications in the chemical, pharmaceutical, food processing, and semiconductor industries, among others.
