### Report Overview

A micro electric ball valve is a small valve that is actuated by an electric motor or solenoid to control the flow of a fluid, usually liquids or gases, through a pipe or tubing system. It utilizes a ball with a hole or port in the center, which acts as the closure element. By rotating the ball 90 degrees, the valve can either open or close the flow path. The main components of a microelectric ball valve include the valve body, ball, actuator (electric motor or solenoid), and control circuitry. The valve body typically has threaded or soldered connections for attaching to the pipe or tubing system. Inside the valve body, the ball is housed, which has a bore or hole drilled through it.
