Report Overview

A Microstrip Patch Antenna is a type of antenna that is widely used in various wireless communication systems due to its compact size, low profile, and ease of fabrication. This antenna is composed of a thin, flat, rectangular metal patch that is either printed or etched on a dielectric substrate, which is typically made of materials like fiberglass or other insulating materials. The microstrip patch antenna operates by exciting a resonant mode in the patch, which then radiates electromagnetic waves. It is particularly suitable for applications in the microwave and millimeter-wave frequency bands, such as in mobile phones, satellite communications, and radar systems. The design of a microstrip patch antenna can be customized to achieve specific radiation patterns and impedance matching, making it a versatile choice for many modern communication technologies.
