## Abstracts

Microwave imaging refers to technology & applications that exploit electromagnetic radiation of frequencies between several hundred megahertz (MHz) and several hundred gigahertz (GHz). Depending on the frequency, this radiation penetrates many optically opaque media (e.g., fog, soil, foliage, wood, ceramics, brick, concrete, plastics, clothing, etc.). The increasing number of hospitals & awareness about health management: The increasing number of hospitals as well as the awareness about health management is a driving factor of the market growth. Further, the growing number of tumour ablation procedures with the help of image-guided devices is helping to boost market growth. Moreover, the rising income levels, ageing population, growing health insurance penetration, increasing government's focus on providing universal healthcare, and the increasing burden of non-communicable diseases (NCDs) are also expected to drive market growth.
