Report Overview

The middle outlet corner ring is a specialized plumbing fitting designed to connect pipes at a 90-degree angle while providing an additional outlet in the middle of the bend, typically used in drainage, venting, or irrigation systems where branch lines need to be integrated seamlessly. These fittings are commonly made from durable materials like PVC, ABS, or cast iron, ensuring resistance to corrosion and high-pressure conditions. The design allows for efficient fluid or gas diversion without requiring multiple separate connectors, reducing potential leak points and simplifying installation. They are widely utilized in residential, commercial, and industrial plumbing applications, particularly in complex piping networks where space optimization and multi-directional flow management are critical. The product's functionality and material versatility make it essential in modern plumbing systems, catering to both new constructions and retrofit projects.
