Report Overview

Military bulletproof glass, also known as ballistic glass or transparent armor, is a specialized type of glass designed to provide protection against bullets, projectiles, and other forms of ballistic threats. This advanced material is typically used in military vehicles, aircraft, and other high-security applications where the safety of personnel is paramount. Military bulletproof glass is characterized by its high strength, durability, and resistance to penetration, often achieved through the use of multiple layers of laminated glass or polycarbonate, combined with other materials such as PVB (polyvinyl butyral) interlayers. These layers work together to absorb and disperse the impact energy, preventing the glass from shattering and maintaining its structural integrity even under extreme conditions. The product is engineered to meet specific ballistic resistance standards, ensuring that it can withstand attacks from various calibers of firearms, thus safeguarding the occupants within the protected space.
