Report Overview

Milk Fat Globule Membrane (MFGM) is a complex biological structure derived from the milk of mammals, particularly cows. It is a natural component of milk and is formed during the secretion of milk fat into the mammary gland. MFGM surrounds and protects the fat globules, providing a protective barrier and contributing to the stability of the milk. This membrane is rich in various bioactive components, including phospholipids, glycoproteins, and specific enzymes, which play crucial roles in infant nutrition and development.
