### Report Overview

Millimeter Wave Human Body Security Screening Equipment is a sophisticated technology designed for non-invasive security screening of individuals. This equipment utilizes millimeter wave technology, which falls within the electromagnetic spectrum between microwaves and infrared radiation, to detect concealed objects on a person's body. The system emits low-power electromagnetic waves that are absorbed and reflected by the human body and any objects it may be carrying. The reflected waves are then analyzed to create an image that can reveal hidden items, including metals, plastics, ceramics, and liquids, without the need for physical contact or exposure to harmful radiation. This type of screening is particularly useful in high-security environments such as airports, government buildings, and other critical infrastructure facilities, offering a balance between security and privacy.
