### Report Overview

A Miniature Thermal Cutoff (TCO) is a compact, temperature-sensitive safety device designed to protect electrical systems and equipment from overheating. It is typically composed of a bimetallic strip that, when exposed to excessive temperatures, bends and triggers a switch to disconnect power, preventing potential damage or hazards. The miniature size of the TCO makes it suitable for use in small appliances, electronic devices, and other compact systems where space is limited. These devices are crucial for maintaining safety standards and ensuring the longevity of electrical components by automatically shutting down systems when they reach a predetermined temperature threshold, thus preventing overheating and potential fires.
