### Report Overview

A mitral valve clip repairs your damaged mitral valve without the need for open-heart surgery. A small metal clip, about the size of a large staple, is attached to your mitral valve via a vein in your leg. The clip stays there permanently and helps your valve to function properly again. The mitral valve clamp system consists of a mitral valve clamp, a delivery system and a valve transducer. Among them, the delivery system consists of a conveyor, a pusher, a loader, an introducer sheath and a dilator. Using this product, there is no need for cardiac arrest and extracorporeal circulation during surgery, the wound is small, the surgical approach is short, and the positioning is direct; and simple ultrasound-guided intervention prevents doctors and patients from being affected by X-rays. The mitral valve clamp capture range is large, which is convenient for operation. The mitral valve clamp adopts a closed ring design, and the clamp arms are not easy to separate to ensure a stable clamping.
