Abstracts

Mitral valve repair interventional devices are medical instruments designed for minimally invasive procedures to treat mitral valve insufficiency or regurgitation. These devices are utilized in interventions aimed at restoring the proper function of the mitral valve, which is responsible for ensuring unidirectional blood flow between the left atrium and left ventricle of the heart. Common interventional approaches include the use of annuloplasty rings, leaflet repair systems, and chordal replacement devices, among others. These devices offer the advantage of reducing surgical trauma and recovery time compared to traditional open-heart surgical techniques, providing patients with effective treatment options for mitral valve disorders.

The global Mitral Valve Repair Interventional Devices market size was estimated at USD 312.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
