Report Overview

Mixed Hydroxide Precipitate (MHP) is an intermediate product derived from nickel laterite ore processing, primarily used in the production of nickel and cobalt for electric vehicle (EV) batteries, stainless steel, and other industrial applications. It is a cost-effective alternative to traditional nickel refining methods, as it bypasses the energy-intensive smelting process, making it particularly attractive for battery manufacturers seeking sustainable and lower-cost raw materials. The market for MHP is driven by the rapid growth of the EV industry, which demands high-purity nickel and cobalt for lithium-ion batteries, as well as increasing investments in hydrometallurgical processing technologies. Key producers are concentrated in Indonesia, the Philippines, and other nickel-rich regions, with major players such as Tsingshan Holding Group and PT Halmahera Persada Lygend leading production expansions. However, challenges such as fluctuating nickel prices, environmental concerns around mining practices, and geopolitical risks in key producing countries could impact supply stability. The market is expected to grow significantly as automakers and battery manufacturers secure long-term supply agreements to meet rising demand for battery-grade materials.
