## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MLCC Internal Electrode Powder Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MLCC Internal Electrode Powder Material is a crucial component in the manufacturing of Multi-Layer Ceramic Capacitors (MLCCs). It is a type of conductive metal powder that serves as the internal electrode within the ceramic structure of MLCCs. The internal electrode of MLCC is fabricated by turning ultrafine powder into a paste using an organic solvent, by printing the prepared paste to a thin layer, and then by firing the printed paste. The most commonly used materials for this purpose are nickel powder, copper powder, and in some cases, silver powder. Driven by relentless demand for higher frequency operation, enhanced reliability, and miniaturization in 5G, automotive electronics, and industrial automation sectors, MLCC internal electrode powders are evolving toward nano-scale, multi-morphology, and alloyed formulations; ultrafine and platelet or flake-shaped particles improve interlayer densification and electrical performance, while advanced processes such as vacuum hot pressing and CVD/PVD enhance sintering uniformity; synergistic integration of powder synthesis, preform fabrication, and placement accelerates lab-to-fab transitions; smart manufacturing and online quality monitoring ensure consistent outcomes; furthermore, low-temperature sintering, lead-free flux systems, and recyclable materials drive green production in line with carbon-neutral and sustainability objectives, positioning the market toward a landscape of high performance, high value-addition, and environmental responsibility.

The global MLCC Internal Electrode Powder Material market size was estimated at USD 990.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 6.40% during the forecast period.
