Report Overview

A Mobile Eddy Current Separator (M ECS) is a versatile, portable recycling equipment designed to efficiently separate non-ferrous metals, such as aluminum, from mixed waste streams. This technology utilizes the principles of eddy currents, which are induced by a rapidly changing magnetic field, to selectively attract and separate conductive materials based on their electrical conductivity and magnetic properties. The M ECS is typically mounted on a wheeled chassis, allowing for easy maneuverability and deployment at various recycling facilities or waste management sites. It is particularly useful for processing materials such as electronic waste, municipal solid waste, and construction and demolition debris, contributing to the recovery of valuable metals and the overall sustainability of waste management practices.
