## Abstracts

A Mobile ID Wallet is a digital wallet that securely stores and manages a person's identity-related information on their smartphone. It is part of a broader trend toward digitizing government-issued IDs (like driver's licenses or passports) and other credentials (such as healthcare information or payment details) for easier, more secure, and portable access. Many countries are now issuing digital versions of national IDs, driver's licenses, and passports. For example, countries like the U.S. (with states rolling out digital driver's licenses), Estonia (with its e-Residency program), and Singapore are pioneers in government-backed digital identity. Mobile ID wallets are increasingly being used to access government services such as tax filings, voting, and social security, creating a smoother and more efficient interaction with public services. Growth in Financial Services and Digital Payments is another key driver for the market. As mobile wallets like Apple Pay and Google Pay expand, the integration of digital ID credentials alongside payment cards creates an all-in-one solution for users to manage both identity and transactions securely.

The global Mobile ID Wallet market size was estimated at USD 288.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.50% during the forecast period.
