Report Overview

Modified Bitumen (MB) Roofing is a durable, flexible, and highly weather-resistant roofing material primarily used in low-slope or flat roof applications. Composed of asphalt modified with polymers such as APP (Atactic Polypropylene) or SBS (Styrene-Butadiene-Styrene), it combines the waterproofing properties of traditional built-up roofing with enhanced elasticity and crack resistance. The material is typically reinforced with fiberglass or polyester mats, improving tensile strength and dimensional stability. MB roofing is available in rolls with torch-applied, self-adhered, or cold-applied installation methods, making it versatile for commercial, industrial, and residential projects. Its performance in extreme temperatures, UV resistance, and ease of repair contribute to its popularity in regions with harsh weather conditions. The growing demand for energy-efficient and sustainable roofing solutions has also led to the development of reflective and cool-roof MB variants, further expanding its market appeal.

The global Modified Bitumen (MB) Roofing market size was estimated at USD 10416.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
