Report Overview

Modified Chlorinated Polyolefin (MCP) is a type of polymer that has been chemically modified to enhance its properties. It is derived from chlorinated polyolefin, which is a family of polymers obtained by chlorination of polyolefins such as polyethylene or polypropylene. The modification process introduces functional groups or alters the molecular structure, leading to improved adhesion, compatibility, or other specific characteristics. MCP is widely used in various industries, including coatings, adhesives, sealants, and elastomers, due to its excellent adhesion to polar substrates, good chemical resistance, and flexibility. The modification can also result in enhanced thermal stability, UV resistance, and mechanical properties, making it suitable for a broad range of applications where performance and durability are critical.
