### Report Overview

Core switches are not a type of switches, but switches placed at the core layer (the backbone part of the network). It is located at the top of the three-layer network architecture and is equivalent to the company's senior managers. Its main function is to quickly forward data from the aggregation layer and provide a fast and reliable network architecture through high-speed data forwarding. Core switches are generally layer 3 switches with network management functions. Modular switches allow you to add expansion modules to the switch as needed, providing flexibility as your network needs change. Examples of expansion modules include application-specific (such as firewall, wireless or network analysis) and modules for additional interfaces, power supplies or cooling fans.
