Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Modular Double Belt Press competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The modular double steel belt press is a high-end continuous pressing equipment that uses two high-precision steel belts running continuously to achieve material curing, lamination, or molding through hot and cold pressing modules. Its modular design allows for flexible combination of functional units (heating, cooling, pressure, peeling, etc.), facilitating customized configuration according to different material processes (such as engineered wood panels, composite materials, lithium battery separators, flexible circuit boards, etc.). The overall market demand for modular double steel belt presses is not large. In 2024, the global sales volume of modular double steel belt presses was only 30 units, and the price difference between different manufacturers is very large.
