### Report Overview

Moisturizers for xerostomia (dry mouth) are specialized oral care products designed to alleviate discomfort caused by reduced saliva production, often due to medical conditions, medications, or aging. These products typically contain humectants like glycerin or hyaluronic acid, lubricants such as carboxymethylcellulose, and sometimes natural extracts for soothing effects. They come in various forms—sprays, gels, mouthwashes, or lozenges—providing temporary relief by hydrating oral tissues and mimicking saliva's protective functions. The market targets individuals with chronic dry mouth, including cancer patients undergoing radiation, those with autoimmune diseases like Sjögren's syndrome, or elderly populations. Demand is driven by rising awareness of oral health, increasing prevalence of conditions causing xerostomia, and the growing geriatric demographic. Key players focus on innovation in long-lasting formulations, natural ingredients, and prescription-grade options, while competition includes both pharmaceutical companies and consumer oral care brands. Distribution spans pharmacies, e-commerce, and healthcare providers, with North America and Europe leading adoption due to advanced healthcare infrastructure. Regulatory compliance and clinical validation remain critical for product credibility.
