Report Overview

Molecular Biology Grade EDTA, or Ethylenediaminetetraacetic acid, is a high-purity chemical compound widely used in molecular biology and related fields. It is a colorless, water-soluble solid that functions as a powerful chelating agent, capable of binding to metal ions such as calcium, magnesium, and iron. In molecular biology applications, EDTA is primarily used to inhibit enzymatic reactions by sequestering metal ions that are often essential cofactors for enzyme activity. This property makes it an essential component in various buffer solutions, such as those used in DNA and RNA extraction, PCR reactions, and electrophoresis. The "Molecular Biology Grade" designation signifies that the EDTA has been rigorously tested and certified to meet stringent purity standards, ensuring minimal contamination that could interfere with sensitive biological assays and experiments.
