Report Overview

A Mono Layer Blown Film Plant is a type of industrial machinery designed for the production of single-layer plastic films. This plant operates by melting plastic resin, which is then extruded through a circular die to form a tube. The tube is subsequently inflated to a desired diameter by introducing air, and as it cools, it is drawn downward, taking on the shape of a bubble. The mono layer aspect refers to the fact that the film is composed of a single material layer, which can be made from various types of polymers such as polyethylene or polypropylene. The blown film plant is equipped with features like a gear pump for precise resin flow, a cooling ring to control the bubble size, and a haul-off unit that helps in winding the film into rolls. This equipment is widely used in the packaging industry for creating bags, pouches, and other flexible packaging materials.
