Abstracts

Monoclonal antibody humanization services refer to specialized laboratory services that focus on modifying mouse antibodies to make them more suitable for human use, reducing the risk of immune rejection and enhancing their efficacy in therapeutic applications. This process involves several steps, including the selection of appropriate human framework genes, grafting of mouse complementarity-determining regions (CDRs) into human framework proteins, and optimization of the resulting humanized antibodies for specificity and affinity. Monoclonal antibody humanization services are essential for the development of therapeutic antibodies that can effectively target disease-related antigens without eliciting an immune response from the host.

The global Monoclonal Antibody Humanization Services market size was estimated at USD 1850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.75% during the forecast period.
