Report Overview

Monopolar Scissors are a type of surgical instrument designed for precise cutting and dissection during various medical procedures. These scissors are characterized by their monopolar design, which means they have a single active electrode that delivers electrical energy to the tissue. The energy is used to cut and coagulate blood vessels, minimizing blood loss and promoting faster healing. Monopolar Scissors are commonly used in laparoscopic and open surgeries, particularly in gynecology, urology, and general surgery.
