### Report Overview

MOP (Muriate of Potash) and SOP (Sulfate of Potash) are two types of fertilizers that provide essential nutrients to plants, primarily potassium. Muriate of Potash (MOP) is a white crystalline fertilizer containing 50-52% water-soluble potassium, derived from potassium chloride. It is widely used in agriculture to enhance crop yield, quality, and resistance to diseases and pests. MOP is particularly beneficial for crops like tobacco, cotton, and citrus fruits that require high potassium levels. On the other hand, Sulfate of Potash (SOP) is a high-purity, white crystalline fertilizer containing 48-52% water-soluble potassium and 18% sulfur. It is derived from potassium sulfate and is suitable for a broad range of crops, especially those sensitive to chloride, such as tobacco, tea, and grapes. SOP not only supplies potassium but also sulfur, which is crucial for plant growth and development. Both MOP and SOP are effective in improving soil structure, promoting better root development, and enhancing the overall health of plants.
