Report Overview

A Mounted Rotary Tedder is a specialized agricultural machinery designed for the efficient and effective management of forage crops, particularly hay and silage. This machine is characterized by its mounted design, which allows it to be attached to a tractor, and its rotary action, which refers to the circular motion of its tines or paddles. The primary function of a Mounted Rotary Tedder is to turn and mix the crop material after it has been cut, promoting even drying and preventing spoilage. The rotary tines work by gently lifting and spreading the crop, allowing air to circulate and speed up the drying process. This type of tedder is particularly useful in large-scale farming operations where rapid drying of forage is crucial for maintaining its nutritional value and preventing the growth of mold or other harmful organisms.
